DETAILED ACTION

1. Claims 1, 4 and 39 are pending and examined on the merits.
2. The indicated allowability of claims 1, 4 and 39 is withdrawn in view of a new reference, U.S. Patent 6,727,077 (Young et al, issued Apr. 27, 2004). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 4, and 39 are rejected under 35 U.S.C. 102(e) as being anticipated by Young (U.S. Patent 6,727,077; issued Apr. 27, 2004; effective filing date 6/17/1997).

Claims 1, 4, and 39 are drawn to polypeptides comprising SEQ ID NO: 4, or comprising an EGF-like domain where the EGF-like domain consists of an amino acid sequence having at least 75% amino acid sequence identity to SEQ ID NO: 4 (see enclosed alignment).

Young teaches a polypeptide comprising SEQ ID NO: 2 that is a sequence that comprises the amino acid sequence of SEQ ID NO: 4. The specification teaches that SEQ ID NO: 4 by itself binds to the ErbB4 receptor and activates tyrosine phosphorylation of the ErbB4 receptor

(page 78, line 14 – page 79, line 27 and page 80, line 29 - page 81, line 2). Thus, the functional limitations recited in claims 4 and 39 appear to be inherent properties of polypeptides comprising the EGF-like domain comprising the amino acid sequence of SEQ ID NO: 4. Therefore, Young teaches polypeptides that are the same as that claimed.

4. If a copy of a provisional application listed on the bottom portion of the accompanying Notice of References Cited (PTO-892) form is not included with this Office action and the PTO-892 has been annotated to indicate that the copy was not readily available, it is because the copy could not be readily obtained when the Office action was mailed. Should applicant desire a copy of such a provisional application, applicant should promptly request the copy from the Office of Public Records (OPR) in accordance with 37 CFR 1.14(a)(1)(iv), paying the required fee under 37 CFR 1.19(b)(1). If a copy is ordered from OPR, the shortened statutory period for reply to this Office action will not be reset under MPEP § 710.06 unless applicant can demonstrate a substantial delay by the Office in fulfilling the order for the copy of the provisional application. Where the applicant has been notified on the PTO-892 that a copy of the provisional application is not readily available, the provision of MPEP § 707.05(a) that a copy of the cited reference will be automatically furnished without charge does not apply.

Conclusion

No claim is allowed.
